1. Please amend Claim 59 (new) as follows (a marked-up version appears at the back of this paper):

1 Claim 59 (once amended) A process for dry-cleaning a textile article containing a localized area
2 of stain or soil, such as an article of clothing, the process comprising the following steps:
3 pre-treating the localized area of stain or soil on the textile article by subjecting the localized area
4 of stain or soil to a fluid pre-treatment composition and an absorbent stain receiving medium, the
5 absorbent stain receiving medium selected from materials free of fluorescent whitening agents and other
6 optical brighteners;
7 placing the pre-treated textile article into a containment means along with an activator cloth
8 containing an activator solution; and
9 heat treating the containment means to vaporize the activator solution.

2. Please cancel Claim 4, without prejudice.

3. Please amend Claim 60 (new) as follows (a marked-up version appears at the back of this paper):

1 Claim 60 (once amended) A system for dry-cleaning a textile article in a conventional or
2 commercial-type clothes dryer:
3 a pre-treatment stain formula for pre-treating spots and/or stains prior to cleaning;
4 absorbent stain removal medium for absorbing the spots and/or stains partitioned from the
5 article to be cleaned by the pre-treatment stain formula, the absorbent stain
6 receiving medium selected from materials free of fluorescent whitening agents and
7 other optical brighteners;
8 activator solution comprising volatile solvent, optional fragrance and the balance water;
9 activator cloth or other substrate with a predetermined volume of the activator solution
10 loaded thereon; and
11 a heat-resistant containment system for containing the textile article to be cleaned and the
12 activator cloth, all within the dryer, whereby the textile article to be cleaned and
13 the activator cloth are maintained in an operative proximity during the process.

4. Please cancel Claim 40 (once amended), without prejudice.

5. Please amend Claim 61 (new) as follows (a marked-up version appears at the back of this paper):

1 Claim 61 (once amended) A method for dry-cleaning textile articles in a conventional home
2 clothes drier comprising the following steps:

- 3 1. Pre-treating any localized area of stain or soil on the textile article by subjecting the
4 localized area of stain or soil to a fluid pre-treatment composition and an absorbent stain
5 receiving medium, the absorbent stain receiving medium selected from materials free of
6 fluorescent whitening agents and other optical brighteners;
- 7 2. Placing the textile article to be cleaned into a heat-resistant containment bag;
- 8 3. Placing an activator cloth loaded with an activator solution into the containment bag; and
- 9 4. Heat treating the containment bag containing the textile article and the activator cloth
10 loaded with the activator solution, thereby causing at least a portion of the activator
11 solution to vaporize and treat the textile article.

6. Please amend Claim 62 (new) as follows (a marked-up version appears at the back of this paper):

1 Claim 62 (once amended) A kit for dry-cleaning textile articles in a conventional clothes dryer,
2 the kit comprising:

- 3 1. A sealed portion of pre-treatment stain removal composition;
- 4 2. At least one portion of absorbent stain removal medium, the absorbent stain removal
5 medium selected from materials free of fluorescent whitening agents and other optical
6 brighteners;
- 7 3. A heat-resistant containment bag; and
- 8 4. At least one activator cloth loaded with an activator solution and sealed.
